

THE EMPRESS EXPRESS

VOLUME IX, No. 51

EMPRESS, ALTA. THURSDAY, May 18, 1922

Price: \$2.00 Per Year

ANGLICAN CHURCH

Services on May 21st (5th Sunday after Easter) in St. Mary's Church:
8 a.m., Holy Communion.
11 a.m., Sunday School.
7.30 p.m., Evening Prayer.
Rogation - tide intercessions for the crops.

Service at Cavendish, 3 p.m.
L. J. Tatham,
Priest-in-charge.

BIRTHS

Born—To Mr. and Mrs. L. H. Brace, May 12, a son.
Born—To Mr. and Mrs. James Doig, May 14, a son.
Born—To Mr. and Mrs. J. Munn, May 14, a son.
Born—To Mr. and Mrs. F. Lyons, May 15, a daughter.

Those attending the evening service at the Union Church, Sunday, "Mother's Day" had the pleasure of listening to a very appropriate address by Rev. V. M. Gilbert and of joining in singing some old favorite hymns. A vocal solo by D. Sutherland was well rendered. A good attendance was present and the service thoroughly appreciated.

Mr. and Mrs. Geo. Holm were visitors in town on Friday last.

Little Phyllis Rose has been very sick during the past few days.

Annual Meeting of Union S. School

The annual meeting of the Union Sunday School was held at the home of Mrs. G. G. Peters on Tuesday evening. Eleven teachers and officers who officiated during the past year were present.

The resignation of Mrs. C. W. Dawdy, as Sup. Cripple Hill, was received and accepted. Mr. F. R. Rivers, was elected Superintendent with Mr. J. Humphreys as assistant.

Other officers elected were: Mrs. E. S. Sexton, Secretary; Miss Myrtle Fountain, Treasurer. Officers of the Primary Dept: Mrs. E. J. Levy and Miss Rowles. Grade R.H. officers (to be asked) Supr. Mrs. A. York Ast, Mrs. M. G. Boyd, Pianist, Miss Lilian Hayes. Librarian (to be asked) S. W. and Leslie Humphreys. Leader of orchestra, Mrs. H. L. Arthur. Teachers of classes were re-elected.

Carl Ryland was fined in the local court, \$20.00 for possession of a still, Island Revenue Dept., pressing \$20.00 for having on his premises more than the legal allowance of liquor, A.P.P. proceedings, and the costs of the Court, on Friday last, April 12. The case was tried before Police Magistrate Bond. Defendant pleaded guilty to both charges. The minimum fine was imposed in each instance.

Planting The Flower Garden

The annual delight to flower lovers of planting the garden is about to be experienced as spring is here. Often the desire to plant, however, is so strong that certain kinds are set out in the garden long before they should be with the result that many plants are ruined with late spring frosts. There is no advantage and great danger in planting perennials, for instance before the last week of May, and tender plants are almost certain to be killed.

In planting the flower garden it should always be kept in mind that green grass is one of the most pleasing sights about a garden, as flowers without grass to set them off may be compared to a picture without a frame. The flower garden then should be so planned that the grass will not be much cut up by flower beds. See that the pieces for flowers are along the boundaries, in corners or close to the house, leaving as much grass, as possible, in an unbroken area.

All herbaceous perennials that are going to be planted this spring should be set out as soon as possible now as the more growth they have made before planting, the less satisfactory will be the results the first year.

Roses should be planted as early as possible, and if the plants seem dry when they arrive, prune severely and bury them in moist soil for a couple of days before planting.

Some of the hardiest annual flowers, the seed of which can be planted outside early in May, are Sweet Alyssum, Calliopsis, Candytuft, Calceola or Pinks, Marigold, Delphinium, Beechholzer, Poppy, Phlox, Drimondii, Virginia Stocks and Verbena, while for best results Sweet Petas should be planted as soon as the ground is dry enough, but good success will be obtained in an average year, even if there is delay in planting for a few weeks. Annuals that are affected by very little frost should not be planted before the latter part of May, as in addition to their probably being killed by frost, these tender things do not succeed well until the temperature of the soil is fairly high. This applies also to such tender plants as Camass and Dahlias. Do not try to be patient any more to day.

In planting the flower garden it is very desirable to plan it in such a way that there will be a succession of bloom from early in the spring until late in autumn. Care should be taken also to arrange the plants in such a way that there will be pleasing blending or contrasts in colors and that the lower growing plants will be in the foreground and, or, at least not hidden by the stronger and taller ones.

Mrs. E. H. Fountain is visiting relatives at Acadia Valley.

Born—To Mr. and Mrs. E. Lyons, May 15, a daughter.

Those attending the evening service at the Union Church Sunday, "Mother's Day" had the pleasure of listening to a very appropriate address by Rev. V. M. Gilbert and of joining in singing some old favorite hymns. A vocal solo by D. S. Sutherland was well rendered. A good attendance was present and the service thoroughly appreciated.

Mr. and Mrs. Geo. Robins were visitors in town on Wednesday last.

Little Phyllis Rose has been very sick during the past few days.

Annual Meeting of Union S. School

The annual meeting of the Union Sunday School was held at the home of Mrs. G. G. Peters on Tuesday evening. Eleven teachers and officers who officiated during the past year were present.

The resignation of Mrs. C. W. Dawdy, as Sup. Grade Roll, was received and accepted. Mr. F. R. Rivers, was elected Superintendent with Mrs. A. Humphries as assistant.

Other officers elected were: Mrs. E. S. Sexton, Secretary; Miss Myrtle Fountain, Treasurer. Officers of the Primary Dept.: Mrs. E. J. Lyle and Miss Howles. Grade Roll officers: To be asked Sup., Mrs. A. York; Asst., Mrs. M. G. Boyd; Pianist, Miss Lilian Hayes; Librarian (to be asked) S. W. and Leslie Humphries. Leader of orchestra, Mrs. R. L. Arthur. Teachers 81 classes were re-elected.

Carl Ryland was fined in the local court 200.00 for possession of a still, Island Revenue Dept., prosecuting 50.00 for having on his premises more than the legal allowance of liquor, A.P.P. presenting, and the costs of the Court, on Friday last, April 22. The case was tried before Judge Magistrate Bond. Defendant pleaded guilty to both charges. The minimum fine was imposed in each instance.

Planting The Flower Garden

The annual delight to flower lovers of planting the garden is about to be experienced as spring is here. Often the desire to plant, however, is so strong that certain kinds are set out in the garden long before they should be with the result that many plants are ruined with late spring frosts. There is no advantage and great danger in planting geraniums, for instance before the last week of May, and tender plants are almost certain to be killed.

In planting the flower garden it should always be kept in mind that green grass is one of the most pleasing sights about a garden, as flowers without grass to set them off may be compared to a picture without a frame. The flower garden then should be so planned that the grass will not be much cut up by flower beds. See that the places for flowers are along the boundaries, in corners or close to the house, leaving as much grass as possible, in an unbroken area.

All herbaceous perennials that are going to be planted this spring should be set out as soon as possible now as the more growth they have made before planting, the less satisfactory will be the results the first year.

Roses should be planted as early as possible, and if the plants seem dry when they arrive prune severely and bury them in moist soil for a couple of days before planting.

Some of the hardest annual flowers, the seed of which can be planted outside early in May, are Sweet Alyssum, Calliopsis, Candytuft, Calendula or P.M. Marigold, Delphinium, Ranunculus, Poppy, Phlox Drummondii, Virginia Stocks and Verbena, while for best results Sweet Peas should be planted as soon as the ground is dry enough, but good success will only be obtained in an average year, even if there is delay in planting for a few weeks. Annuals that are affected by very little frost should not be planted before the latter part of May, as in addition to their probably being killed by frost, these tender things do not succeed well with the temperature of the soil is fairly high. This applies also to such tender plants as Camellias and Dahlias. Good may be planted any time in May.

In planting the flower garden it is very desirable to plan it in such a way that there will be a succession of bloom from early in the spring until late in autumn. Care should be taken also in such a way that there will be pleasing blending or contrasts in colors and that the lower growing plants will be in the foreground, or, at least not hidden by the stronger and taller ones.

We want assimilation, but the inclination is to force it. That is bad; let it permeate gradually. Teach my children to be Canadians, but don't weigh more than a moderate sized book. Light is provided by a bulb in which burns two fluorescent tubes.

In an adjoining room is a telephone from which I can talk to any city on earth. A thermostat regulates the flow of air in my furnace and keeps the room at an even temperature of 70°.

Almost within arm's reach are several shelves of books filled with the most profound and beautifully illustrated of all books—the Bible. Some are cleaned with a nuclear sweeper, operated by electricity and a vacuum pump. A television set, electric washer and ironed in an electrically driven mangle.

My children attend a school where the best of the education is that the sons of kings could com-

What has happened in the United States middle west is also happening in Canada. The prairie is being leveled, which fifty years ago, was located a comparatively short distance from the coast. The Red River, has advanced several hundred miles into what was formerly the prairie. The prairie is being broken up into small "islands" and groves of trees are today to be found the outskirts of districts, where there were formerly prairie. It is believed to be due to the fact that the progress of settlement has stopped, and the prairie is being leveled, and given the trees a chance. Progress westward has been slow because the prevailing winds are from the west, and the trees are blown largely by wind. In the last fifteen years, however, the rate of advance has been slow, and the prairie of the more determined fight against prairie fires. Trees are now again being planted in the prairie, and forest land the Saskatchewan. In addition to this normal process of forest growth individuals are being planted in the prairie all over the west. The Dominion forest nursery station at Indian Head has sent out more than a million seedlings of thousands of farmers in the last twenty years, and this with civic and school planting has changed the appearance of the prairie.

Scientists Claim That People Of Rural Districts Will Live The Longest

Big game in Alberta will be further protected, if amendments to the Game Act are passed. Under the amendments a big game hunter can kill only one mountain sheep or moose, one goat, instead of two, and a special license may be obtained to kill big game in forest reserves of the Rockies only during the months of September and October, the fee being \$2.50 for residents and \$25.00 for non-resident hunters.

Facts About Radio

What Radio Telegraphy Means and Principle of Invention

Radio waves in the behavior pretty much like waves in the water. Suppose a string is attached to a stone which is plunged in and out of the water, constantly sending out waves. The length of the wave is the length of the string. This is just the operation of a radio transmitter during a sending.

If the stone is lifted and more force or pressure is put behind it, the waves will travel outward further. Just so with a radio transmitter. If the source of power is greater, the electromagnetic waves will travel a longer distance.

The length of the wave will remain the same. The amount of power of a sending set has nothing to do with the wave length.

Wave lengths depend on the amount of resistance and capacity in the antenna circuit of the set and the frequency with which the alternating current is transmitted.

In the transmitting instrument there is an inductance consisting of a spiral coil or heavy copper wire which is variable. By means of this some inductance may be added and the wave length increased.

If the main antenna has too much inductance and the wave length is too long, a condenser of small capacity is placed in series with the antenna circuit to cut down the inductance.

Wave length travel with the speed of light—186,000 miles a second. The waves may be sent out in one direction. If the antenna is constructed directionally.

Take a large flat stone and let the heaviest surface strike the water. The waves will travel in one direction.

In radio transmitting the directional aerial is used. The transmitting stations want to throw the most of their energy in one direction.

Broadcasting stations do not use directional antennas. They want to cover the largest possible area.

Says Mars is a Dying World

Prof. Arrhenius Discusses Possibilities of Planets for Investigation

The planet Mars—an old dying world—is receiving almost too much attention from earthly scientists these days and nights, while the ever-coming young planet Venus is just waiting for a chance to know us better.

It is the conclusion of Professor Arrhenius, noted physicist and one of Europe's foremost scientists and astronomers who is lecturing on the prospect of "what comes from the heavens the secrets of some of our celestial neighbors and especially Mars when we are able to see it close proximity to the earth two years hence.

If scientists and long distance space fans really want to communicate with some celestial neighbor, Professor Arrhenius said, they will not find Mars very easy to get to. The follow-up or already dead Mars is covered with hard frozen sand and is so dry that its only rain is meteoric dust. Perhaps a few meadows still exist, he said, but it is highly improbable that even low animal life could flourish to any extent. He described the "fantastic" belief that so-called canals observed on the planet were the work of engineers and attributed them to earthquake fissures.

Venus, on the other hand, offers potential possibilities to the patient astronomer. Professor Arrhenius declared, "By patient" he meant about a billion years, he explained. At the expiration of this period, he thought a flourishing colony of intelligent beings might be developed on the bright little planet.

Everything on Venus is dripping wet," he continued. "The planet is covered by constant rain-clouds 10 kilometers thick, revealing to rays from the sun penetrating to the bottom of the atmosphere. Life on the planet of love is short and intense."

Living organisms, he thought, might be found at the polar regions where the temperature was slightly lower than other parts of the planet. "When the earth is extinguished," he concluded, "it will be Venus, queen of the heavens that will take over the role as carrier of culture."

Water Power in Canada

Water power now developed in Canada represents an investment of \$250,000,000, according to a report issued by the Water Power Branch of the Department of the Interior.

The development represents an annual equivalent of 20,000,000 tons of coal. By 1910, should the rate of growth of installation during the past fifteen years be continued, the amount of investment will have grown to \$1,000,000,000.

Woman's Power Over Man

Men Inspired by the Influence of Some Women Whom They Respect

"Remember," said a London magistrate to a complaining wife, "that a soft word from a woman will bring a hard man to his knees." This tremendous saying, however, is one of the mysteries of life. There is no accounting for it. It cannot be explained or analyzed.

The generosity of woman possesses this wonderful power, some in a much greater degree than others, but not all of them. Some have it, some do not. If every woman knew her power over her man what a world it would be.

As it is, half-perhaps more than half-of the credit that is given to men for their achievements is due to some little woman who remains in the background, whose name the world never knows, though it knows the fame of her man. The statesman and the clerk, the professor and the student, the soldier, the man of letters, the painter, the musician, the man of science or of medicine—all are inspired by the influence of some little woman, whom they love, whom they have won or whom they hope to win, or to whom they owe their life.

Some women, when they love, win the rebel who is in every man now and then breaks loose, who it is that he can tame him. Any woman can begin to do so, for her man, after "soft word" will bring him to his knees.

A play that so many women forget or do not know this and use the harsh word that stirs up strife.

A Good Early Corn

Variety Originated at Dominion Experimental Farm Gives Good Results

Early Malcoln table corn originated at the Central Experimental Farm, Ottawa, has given excellent satisfaction and good results in a wide distribution. It seems to be about ten days or two weeks earlier than the Golden Bantam, which has good quality.

The Dominion Horticulturist, Mr. W. T. Macoun, reports on it as follows: "This Early Malcoln corn was obtained by selection from the Early Malcoln, which variety was introduced from Russia by Prof. Hansen, of South Dakota. This selection was made in 1909, and by 1912 the variety was so changed that it was decided to name it Early Malcoln. Since that time it has been steadily selected for better ears and earliness.

This variety has become very popular and seed is now sold in the United States and Canada and is now offering it for sale and are eager to get seed. The average length of ear is six inches and number of rows to the ear twelve."

To Aid Widowed Mothers

Major Power Renews Efforts for Better Pension Provisions

Major Power of Quebec South, is renewing this session his effort to get better provision for the widowed mothers of those soldiers who died in service.

He has given notice of a resolution for the House to amend the Pension Act to provide that pension of a widowed mother of a member of the forces who died in active service should not be reduced, on condition that she shall have a right to a pension, whether or not there are other children living.

The pension of a widowed mother receives no pension if she is in receipt of an income regarded as sufficient, or if she has children who are able to support her.

Major Power is also seeking to bring soldiers' mothers, who have been deserted by their husbands, under the benefits of the Pension Act. The resolution further provides that such pensions shall be at the same rate as those awarded to widowed mothers.

Horses Go East

Saskatchewan Now Shipping Horses to Ontario Buyers

For many years Saskatchewan and Alberta have been steady buyers of eastern horses, but the natural advantage of these provinces in producing the best of the animals is beginning to assert themselves to the extent that quite recently a shipment of horses from Saskatchewan to Ontario was made. The animals were mainly of Belgian and Percheron breeding and prices to buyers in Ontario ranged from \$150 to \$180 each.

Renewed Interest in Livestock

Cattle and horses have come back to the winter in Alberta in splendid condition, according to reports received from stock raisers by the Provincial Department of Agriculture. There has been ample feed and no losses. The fact that cattle have increased in value since last fall is attracting renewed interest in the stock raising industry.

Memorial to Early Explorer Takes form of Primitive Fort

Visitors to the tourist region at Hudson Bay Post at Inverness Point on Lake Winnipeg, B.C.

"KOOTENAY HOUSE," RESTORED HUDSON BAY POST AT INVERNESS POINT ON LAKE WINNIPEG, B.C.

Visitors to the tourist region at Hudson Bay Post at Inverness Point on Lake Winnipeg to Southern British Columbia, will find a reminder there of early days. The Hudson's Bay Company is building a replica of their first post in this region. It was known as "Kootenay House." It was built by the intrepid astronomer and explorer, David Thompson, in 1806 on the shore of lovely Lake Winnipeg.

David Thompson, a pupil at Blue College, London, was selected to the Hudson Bay Company for the sum of five pounds sterling. The company sent him to Canada where he was equipped and sent up the Hayes River with a party. In 1795, he was with three companions, two of them Indians, made their way from Hudson's Bay to Lake Athabasca. On his return to York Fort he was informed that the company would make no more explorations and that he was out of a job. He did not allow this to discourage him but set off in

company with two Indians for Grand Portage where he obtained an appointment as astronomer for the North West Company, whose headquarters were at that point.

An astronomer he visited the company's various posts and while in the Lake-of-the-Woods region in Manitoba, he was the first white man to do this. The winter of 1804-5 was spent at Kootenay House with his "little family," as his Indian wife and children were termed. In October, 1810, he set out to trace the Columbia River from its source to its mouth and was the first white man to do this. Arriving at what is now Astoria, Oregon, in July, 1811. The trip was accomplished despite great perils. Thompson died at the age of 37, poor and unappreciated. Posterity has recognized his debts to this brave man.

Saskatchewan Soil Survey

Much Valuable Work Will Be Carried Out This Year

Preparations are being made by the University of Saskatchewan to resume this summer its field work on the survey of the province which was commenced a year ago. Professor Roy Hansen, of the Department of Soils, will again be in charge of the work, which will probably start in the vicinity of Moose Jaw. The intention is to revisit the districts which were surveyed last year, so as to check the results obtained at that time. Two additional districts, each comprising four or five milled miles, will also be surveyed during the coming summer.

It is expected that the first results of the survey will be available for publication some time next winter. While it is understood that there is a natural desire to obtain the benefit of the survey at an early date, it is possible that those who are responsible for the survey are at the same time anxious that it shall be authoritative, and for this reason they desire to verify and enlarge last summer's observations before publication.

In order to expedite the work, the University has added to its staff Mr. A. H. Joel, a graduate of the Michigan State Agricultural College. Mr. Joel has had experience in soil survey work in Michigan where a large part of the state has been surveyed in a very thorough manner. He is now completing the analysis of the samples of soil collected last year. The benefit of his appointment will be particularly felt in connection with the soil survey, in cases of doubt, to send samples of soil from the field to the laboratory, and receive the result of the analysis while the soil is still working in the same vicinity.

Wool Production in Canada

Wool production in Canada in 1921 was 21,251,456 pounds, according to an estimate of the Bureau of Statistics. At an average value for unwashed wool of 14c a pound, the total value of the wool clip amounts to \$2,975,000. The total number of sheep and lambs in Canada in 1921 was estimated at 7,675,860.

For Western Canada

Striking textile operative in New Brunswick are being urged to emigrate to Western Canada. An agent of the Canadian Department of Immigration and Colonization, who has been touring New England, announced that he had sent 250 families to Alberta and Saskatchewan, including 160 from Manchester.

No man should be so long as he is a human being for whom it can feel, trust and reverence.

Eastern Farmers Also Feel the Pinch

Farmers in Ontario Also Feel the Pinch

The drop in the price of farm produce has seriously handicapped Ontario farmers who bought land when prospects were brighter a year or two ago. Many of the farmers did not make a living last year, and barely managed to gather the necessary funds together to meet their mortgage. Some of the mortgage holders refused the interest because they considered the farmers were not able to pay. The matter has recently been aired in the courts. One man states that "if the Minister of Agriculture introduces a measure for rural credit, it will be a blessing to men like myself." He bought a 200-acre farm, of which 140 acres were workable. The farmer had no money and was very needy and he found it difficult to amass the interest due.

Speaks 20 Languages

American Minister to Denmark is an Accomplished Linguist

John Dwyer, Prince, American Minister to Denmark, has made a hit with the Danish people by his versatility. Soon after his arrival in Copenhagen the newspaper men swooped down on him for an interview, having previously brushed up on their English, but Dr. Prince took them off their feet by speaking fluent Danish. Before the interview was over they learned that the new minister, formerly a professor at Columbia University, had some 20 languages at his tongue's end.

Soon afterwards Dr. Prince delivered a lecture on Oriental music, and here again his versatility found even wider scope. He illustrated classical musical techniques by playing various Oriental instruments with ease.

Guns In Russia

Report That Krupp to Start Factories

According to a despatch to the London Daily Mail from Gussenopolis, clauses in the Russo-German treaty provide, among other things, that Germany shall export 6,000 Russian rifles on one in Germany to return to Russia if they so desire; that Germany shall prohibit sales of German arms and suppress all other revolutionary organizations in Germany; that Germany shall not export war materials to pass from Germany into Poland, Rumania and Estonia; Russia on her part, according to a despatch, shall prohibit the export of explosives to manufacture guns and war materials in a number of factories in Russia.

Stock Feed Investigations

Much of the Bran and Shorts Now Milled do Not Conform to Standards

A matter of vital importance to farmers, stock raisers and stock buyers is the character of the feeds that they have to supply to livestock. So many complaints were received regarding the unsatisfactory nature of the milling by-products of wheat—bran, shorts, middlings and feed flour—that the Dominion Minister of Agriculture concluded to make an investigation with a view of ascertaining how far the present standards for these feeding stuffs, in respect to percentage of protein, fat and fibre, as set forth in the regulations of the Feeding Stuffs Act, are too strictly applicable. Also to determine the cause or causes of the complaints, particularly as they related to the effect of feeding such products to swine and young stock generally. Preliminary to the investigation, joint meetings were held with representatives of the Millers' Associations, Livestock Associations, and of the Federal Department of Agriculture, and as a result trial samples of feeding stuffs from all parts of the country were gathered in and tested by the Dominion Chemist.

The evidence secured and the recommendations reached are given in detail in a bulletin just issued by the Department of Agriculture at Ottawa, entitled "Bran, Shorts, Middlings and Feed Flour."

It is disclosed that much of the bran and shorts now milled do not conform with the present standards, in respect to protein. First, the marked changes in modern milling practices, whereby a larger proportion of the bran is removed from the middlings, and second, the practice adopted by some mills of grinding and mixing with the shorts the miller's screenings, which at best must be regarded as adulterants. The standards of the act require that the feed collected are: For bran, not less than 15 per cent of protein instead of 14 as at present; not less than 2.5 of fibre instead of 3 per cent; and for shorts, not less than 15 per cent of protein instead of 10; not less than 5 per cent of fat instead of 4; and no change in fibre, the percentage of which stands at not more than 1.5 per cent.

For middlings, the standards for which at present are the same as for shorts, are: not less than 16.5 per cent of protein; not less than 2.5 per cent of fat; and not more than 4.5 per cent of fibre. Tabular statistics are given in the bulletin of the result of the examination of twenty samples of feed flours and thirty samples of screenings. The percentages of protein are the most variable, while a fair average for a good quality of the feed flours would be 18 per cent, protein, 2.5 per cent fat, and 2.5 per cent fibre.

Saskatchewan Dairy Convention, 1923

Preparations Already Under Way for Next Year's Meeting

At a meeting of the directors of the Saskatchewan Dairy Producers' Association, held in Regina, it was decided to hold the 1923 convention in the city of Saskatoon, February 7, 8, 9. Invitations were sent to all dairymen in Saskatchewan and Manitoba. The City Council of Saskatoon and the Chamber of Commerce of that city had also sent invitations to the 1922 convention asking that next year's convention be held in their city, and Mayor Harry McConnel, of the city of Saskatoon, visited the directors while they were in session on the 12th and again extended an invitation on behalf of the city. It was later decided by unanimous vote of the directors that next year's convention should go to the city of Regina.

Although the 1923 convention is a long way off, a number of committees were appointed to get convention arrangements made as a real important agricultural gathering, the Saskatchewan provincial convention is attaining greater importance each year and now is being held as a real important dairy gathering every year in the province.

Railways in Russia

German Made Engines Are Delivered to the Soviet

Four of the largest locomotives ever built by the Soviet Government arrived in Moscow recently from Germany, each weighing 96 tons.

While the reconstruction section work has been done on nearly all lines under the Soviet regime, foreign railroads are being built in need of repair everywhere and much will have to be done this summer if Russia's railways are to be kept in running order.

The Course in Ceramics

The Saskatchewan Government, which has a very complete ceramic laboratory at the University of Saskatchewan, has now established a course in ceramics to train students. A survey is being made of clay resources of the province for information and advisory purposes, those deposits near transportation being dealt with first.

To Study Prohibition

A commissioner will be sent by the Saskatchewan Government to study the truth about prohibition in Canada and the U.S. according to an announcement by Premier Lougheed. Upon the report made by the commissioner, the Government of the State will then act on prohibition measures there.

German Made Engines Are Delivered to the Soviet

Particulars of Grasshopper Menace and Local Control

The following information is
supplied by J. Barnes, of
Sharrow, who is in charge of
Grasshopper District No. 12

Any farmer who may be wish-
ing to know what the eggs of
grasshoppers look like, we
have a few which were left at
the "Express" office by Mr.
Barnes, for this purpose.

Grasshopper hatching season
is with us, and it behooves every
farmer to investigate any prob-
able breeding places.

The Government is paying
for half the cost of material,
the other half will be paid in
the general taxes of the districts.

To locate the road-side grass-
hopper a very close inspection
will be necessary in the early

stages of development as they
are no larger than mosquitoes,
and will be found along the
headlands and road allowances,
as these places are where the
adult hoppers lay their eggs.

If an inspection for the eggs
is contemplated they will be
found in the soil about one half
inch below the surface in clus-
ters of 20 to 30 as the pod
which contained the eggs is
broken by the swelling of the
eggs at this time.

Eggs will not be found in the
loose soil in the grain fields.

The method of control is
through the establishing of
mixing stations situated at
convenient places. A supply of
ingredients for the poison bait
will be kept at these places and
the bait will be mixed before sent
out to farmers applying for it.

The maximum amount to be
used per acre is 25 lbs., but this
amount will be just as efficient
if thoroughly spread. The
most advisable time to spread
the bait is the early morning
just as soon as the sun begins to
warm, around twenty minutes
after sunrise is the proper time.

One station to the Municipal
Unit is being established as
near as will be efficient. In
this control district No. 12
stations will be established at
Binloss, C. F. DeBolt in charge;
Buffalo, J. A. Seams in charge;
Atlee, Wm. Tildesley in charge.
A station will be at Caddon, and
one at or near Chilmark. Acadia
Municipality are having a
station at Acadia Valley. In-
vestigate any probable breeding
places and get in touch with

your officer in charge of the
district.

Proposed Irrigation Project

In connection with a propo-
sed irrigation scheme for the
country immediately south of
our town the following item
has appeared:

"To investigate and report on
the feasibility of the con-
struction of a dam across the south
Saskatchewan river for an ir-
rigation project, Lieut. A. J.
McPherson has gone to Pelly,
in Western Saskatchewan,
where he will confer with a
party of Federal government
engineers and surveyors who
are on the site.

The proposal is to build a
dam thirty feet high across the
river north of Pelly, which
out to farmers applying for it
branch of the Canadian Pacific
Railway. It is stated that the
erection of such a dam would
provide irrigation for 100,000
acres of land in the vicinity.

It is also suggested that in
the event of the proposed
scheme to furnish Regina and
Saskatoon with a water supply
from the river at or near the
river being put into operation,
the power for pumping could
be obtained from the Pelly
dam. The construction of a
power transmission line to fur-
nish light and power for a
number of towns along the
Empress branch, is also being
considered as a part of the
project. The river at Pelly is
narrow and while no estimate
of the cost has been made it is
believed by some engineers that
it's work would not entail a
heavy outlay."

They approached a rather
handsome-looking restaurant
and stopped before a sign which
read, "Luncheon from twelve
to three fifty cents." The old
lady never dreamed of eating
in such a nice place, but the old
man who was on the right side
halted before the door, "We'll
go in there," he said, "It ain't
a bad bargain, Hunner—three
hous' steady eatin' for half a
dollar."

**It May Happen in

LORD LISTER & Zam-Buk

Lord Lister's discovery of antiseptic surgery has saved the world a lot of lives, but it has been left to Zam-Buk to bring into millions of homes the full benefits of antiseptic health.

Zam-Buk is the greatest antiseptic healer the world has ever known. It is a natural vegetable origin. Zam-Buk has distinct and positive advantages over all other antiseptics. Zam-Buk is a compact and highly-refined balm with an antiseptic power many times greater than that of any ordinary salve or ointment. Zam-Buk kills and excludes disease germs, and instantly allays pain and irritation. It first cleanses the area and then grows over it a new healthy skin. As a first-aid dressing for injuries and for treating such troubles as eczema, ulcers, ringworm, skin eruptions, poisoned wounds and pills, Zam-Buk is used the world over. It has the high endorsement of Dr. Andrew Wilson and other well-known doctors, surgeons and nurses. Box, 2 for \$1.25, all others, 3 for \$1.75.

THE WORLD'S ANTISEPTIC HEALER

MY CANADA

— BY —
ELINOR MARSH ELLIOT

Published by Special Arrangement with the Author

(Continued)

II. Winnipeg.

June, 18th, 19—

When Mr. Arnold came home from luncheon today he suggested that we should all go out on the river for the afternoon. We went. After the result is that my face and arms are burned to a blister. I am sure that Canadian sunbath is worse than the English variety. Fortunately for the continuation of my diary, I am not to be seen, no under a half-inch layer of cold cream. I have gone into retreat for the evening.

I am greatly tempted to describe my adventures in the Pullman sleeping car, but, according to Mary, that is forbidden ground.

Our train pulled into Winnipeg on the morning of Tuesday, May 21st. The negro porter was a hand to brush my coat and to gather up the various belongings which my Englishman can travel. I do not like to think that the courtesy and consideration shown to a lone woman on the Canadian Pacific Railway is entirely due to a female. I am sure that the virtue of this kindness is at least partly responsible.

When Ralph was a small boy, someone who sympathized with him in his taste for "blunder" things gave him an illustrated book of "Travels in the Wilds of North America" which contained in it his dream for years. It showed a man running the gauntlet between two of the most looking Indians. I am sure, after all these years, the Indians are not of a similar scene, minus the Indians. As I stepped off the train a uniformed negro took my bag and said, "This way, lady; the gent's just outside," and I followed him across the

Pimkie Finds Something Interesting.

As you know, Pimkie in the most adventuresome of the Fair's four Brownies. He grows restless every now and then and when he is out of the boat he is up to his eyes in the water, where he can learn things and make new friends and have strange experiences and lots of fun. So it could hardly seem surprising that Pimkie took the Earth home, and was having a perfectly beautiful time amongst some rocks near the seashore. I may hear the seashore, because the spot where our little Brownie friend was playing would have been entirely covered had it been high tide; but it was the deepest, lowest kind of a low tide and the rocks were fully exposed with pools between them: here and there were stretches of sand, making a wonderful place to play. So it could hardly seem surprising that Pimkie was not only having a glorious time but that he was gloriously wet. I did not see him, but I am sure he was there. I am sure he was so fond of the wet sand and the sea, that he was so fond of the one with the red tassel.

As the sun was warm he decided to strip and stretch his clothes on a high rock to dry. No sooner thought of than done! In less than a minute Pimkie was quite rid of his clothes and swimming around one of the shallow pools between the rocks. He himself is so little that he didn't frighten or even disturb the countless tiny sea creatures sharing the pool, for they looked upon him almost as one of themselves. I suppose there are so many different kinds of creatures of the sea and sand that a new one or two never surprises the others. Of all that the Brownie saw, none amused him more than the Hermit Crab. There were even so many of them all around him. All that a Hermit Crab needs for a night is to see another Hermit Crab! The mere sight of one another seems to excite them so that they immediately engage in furious battles, and Pimkie watched one fight after another.

"They certainly are a rowdy lot," I wonder what all the fighting is about." And after a little while he suddenly realized what the trouble was. Do you want to hear some more about these tiny Crabs and what the Brownie found out by watching them?

It seems that without meaning to, he had moved an empty shell with his foot, which was the cause of all the excitement. The shell had been empty because the little Hermit was hiding in it. He was in the act of trying another shell to see if he would like it better than the one he had been living in. He had outgrown his old shell and it had become uncomfortably tight, so this was his way of getting a new one; then when Pimkie pushed up the sand the Hermit, in a great fright, tried to hustle back to the safety of his old place, but he couldn't get back, and he was stuck in the empty shell. Hermit Crab without a shell is indeed in trouble! He couldn't feel imagine being in any worse trouble, and feeling sure that he was in the midst of some awful Crab night-mare, he dashed wildly back and forth, this way and that, in an effort to get out of the shell, but he couldn't get out, and he was stuck in the empty shell. Hermit Crab without a shell is indeed in trouble! He couldn't feel imagine being in any worse trouble, and feeling sure that he was in the midst of some awful Crab night-mare, he dashed wildly back and forth, this way and that, in an effort to get out of the shell, but he couldn't get out, and he was stuck in the empty shell.

Next week's story will be more about what Pimkie saw. Copyright, 1922.

plains. I wish I had a photograph of the sight that met my eyes as I entered the door of the station. From one side of the roundabout to the other stretched two rows of people, and between these two rows the incoming passengers ran the gauntlet in the most approved fashion, until they were recognized by onlookers. The whole distance probably was half a hundred feet or less, but it seemed to me to be at least a mile, and I was sure that I had to find the Arnold's waiting for me at the door. I had felt sure that Mr. Arnold would meet me, but I imagine my joy when I saw not only him but Mrs. Arnold and Mary. I may also admit that I was glad to turn my luggage checks over to Mr. Arnold. Men are useful when all is said and done.

In a few minutes we were in a taxi cab and whirling along Main Street on our way to the Arnold home. I had always understood that American cities were laid out strictly according to rule, but it appears that Winnipeg's main thoroughfare was surveyed by a cat! The legend is that in the early days before Winnipeg was a city strayed from the settlement in Kidman and made his way to Port Gary—Winnipeg is built on the site of the old fort, the latter followed it on horseback—next day another man in his Red River cart took the same trail. And in this way, Main Street, Winnipeg, was duly opened, without the assistance of such modern conveniences as civil engineers, compasses, tape-lines, and transit.

It is probably unnecessary to add that cats are not, as a rule, wander in a straight line, and as it has not been considered essential to the welfare of the city to make a change, Main Street remains as crooked as the trail of the innocent cat broke the trail. I go against the grain to admit it, but in honesty I have to record that some jocular people assure that the old road followed the bends in the notoriously crooked Red River.

The First Talking Machine

The teacher was exasperated. The class was idle and inattentive, and he was unable to get them to do their work. In desperation she changed the subject from mathematics to science, and began to ask each boy and girl questions about the great inventions of the age.

"Now, then," she said impatiently, "what was the first talking machine made of?"

After a while a voice from the back of the class broke the silence:—"Please, miss, a rib."

Use **MURINE EYES** for eye troubles. It is the only eye medicine that is safe for the eyes. It is the only eye medicine that is safe for the eyes.

Why Castoria?

YEARS ago Castor Oil, Paregoric, Drops and Soothing Syrups were the remedies in common use for Infants and Children; Castor Oil so nauseating as to be almost impossible and the others all containing Opium in one form or another, but so disguised as to make them pleasant to the taste, yet really to stupefy the child and give the appearance of relief from pain.

It required years of research to find a purely vegetable combination that would take the place of these disagreeable, unpleasant and vicious remedies that from habit had become almost universal. This was the inception of, and the reason for, the introduction of Fletcher's Castoria, and for over 30 years it has proven its worth, received the praise of Physicians everywhere and become a household word among mothers.

A remedy ESPECIALLY prepared for Infants and Children and no mother would think of giving to her baby a remedy that she would use for herself without consulting a physician.

Children Cry For Fletcher's CASTORIA

Have You Tried It?

Everybody has read the above headline; how many believe it? Have you a little-one in the home, and has that dear little mite when its stomach was not just right felt the comforts that come with the use of Fletcher's Castoria? You have heard the cry of pain. Have you heard them cry for Fletcher's Castoria? Try it.

Just help baby out of its trouble tomorrow with a taste of Castoria! With the difference in the tone of the cry, the look in the eye, the wiggle in the tiny fingers. The transformation is complete from pain to pleasure. Try it.

You'll find a wonderful lot of information about Baby in the booklet that is wrapped around every bottle of Fletcher's Castoria.

GENUINE CASTORIA ALWAYS

Bears the Signature of

Chas. H. Fletcher

Times Have Changed

Do you remember the old stories about the boy who went to the great city and came back home just in time to pay the mortgage off the farm?"

"Yes," replied Farmer Cornsloss.

"It's different now. When a boy leaves the farm the home folks have to hold them in readiness to go to town and help him out with his rent and his grocery bill!"

Fulness After Eating

If you have fulness after meals, a taste in your mouth in the morning, flat on the tongue, flatulence after meals, no appetite, take **Mellin's Food**. It will clean your system, renew your appetite, give you relief from food and the power to digest it thoroughly and easily. Sold in 50c and \$1.00 bottles at drug stores.

U.S. Factories in Canada

Branch Establishments Represent Capital of \$400,000,000

According to a recent statement made by the President of the Canadian Manufacturers' Association, six hundred United States factories now have branch establishments in Canada which represents a capital investment of the thousands and provides employment for 37,000 persons. Manufacturing in Canada received a great impetus during the war and there are now more than 2,600 varieties of articles manufactured in the Dominion that were imported prior to 1914.

Cutting Ice and Sowing Wheat

Recently the unique spectacle was witnessed near the town of Botha of the ice harvest in progress on one side of the road allowance, whilst seeding was under way on the other. The warm weather had put the land in good shape for seeding and induced one farmer to get out his drill, whilst the same weather suggested to his neighbor the advisability of getting in his ice supply before that available was exhausted.

\$ in cash prizes

Many people have discovered that 2 in 1 Shoe Polishes are good for other things than for shining shoes. For example:—

- 2 in 1 BLACK—Good for polishing motor cars; refinishing suit cases, kodaks, black gloves, rubbers, hats, etc.
- 2 in 1 WHITE—cake or liquid—Good for cleaning hats, stains in white skirts, white kid gloves, auto tires, etc.
- 2 in 1 TAN PASTE—Good for polishing furniture, hardwood floors, etc.

For the Best List of New Uses for 2 in 1, We are Awarding Cash Prizes as Follows:

- | | |
|---|--|
| 1st award \$500.00—for the most acceptable list | 20 prizes of \$15.00—for the next twenty |
| 2nd " 300.00—for next best list | 50 " 5.00—for the next fifty |
| 3rd " 200.00—for third best list | 50 " 2.00—for the next fifty |
| 10 prizes of 25.00—for the next ten | 100 " 1.00—for the next 100 lists |

Try to find new uses for any of the 2 in 1 Shoe Polishes, either black, tan, oxblood, or brown paste, white cake or white liquid, black or tan combination. Write on one side of paper only. List uses according to colors. Awards will be made according to decision of special committee, and payment made on or before October 1st, 1922. All lists submitted to become our property. Address:

Prize Editor,

I'm So Tired

Fatigue is the result of poisons in the blood. So when the kidneys fail to purify the blood one of the first indications is unusual and persistent tired feelings and pains in the back.

Neglected kidneys trouble lead to years of suffering from rheumatism or develop into such fatal ailments as Bright's disease.

The kidney action is promptly corrected by use of Dr. Chase's Kidney-Liver Pills—the best known regulator of kidneys, liver and bowels.

Mrs. John Ireland, R.R. No. 2, King, Ont., writes:

"I was a great sufferer from severe headaches and biliousness. I tried a number of remedies but nothing gave me any benefit until I was advised to use Dr. Chase's Kidney-Liver Pills. These completely relieved me and made me feel like a new person. I am very grateful to Dr. Chase for the pills that they have done for me, and you may use my letter for the benefit of others."

Dr. Chase's Kidney-Liver Pills, one pill a dose, 25c a box, all dealers or Edmondson, Bates & Co., Ltd., Toronto.

Next Sunday, May 28, is "Go to Sunday School Day."

Material for the building of a new scow for the south ferry has arrived.

Dr. MacCharles, returned on Tuesday, from Winnipeg.

Many Blindness, Estuary and Leader visitors were here on Victoria Day.

Mr. and Mrs. A. Coulter, and family of Abbots, were the guests of Mr. and Mrs. W. Rose, Sunday.

Local High School girls defeated Estuary school girls in a basketball game, Wednesday.

W. C. Boyd secured best score at the trap-shoot, making 18 out of a possible 21.

Ford's Crisco Bread may now be obtained at Mrs. J. C. Hughes' restaurant. They receive a fresh shipment of this each day.

Much interest is being taken in the gardens, these days. Mel. Blodgett is trying out some ever-bearing strawberry plants.

Rev. J. D. Orpen, arrived in town on Tuesday last week, and is living with Rev. L. J. Tatham, whom he will assist in organising the Anglican Church along this line between Swift Current and Hildesburgh.

To Which Class Do You Belong?

82 p.c. of the combustible property is insured against fire, BUT ONLY 7 p.c. of the economic value of human life is covered by insurance.

100 p.c. of men engaged in active business fail to reveal all data with competence.

WHY TAKE THE CHANCE?

While you are in good health is the time to insure.

I will be pleased to discuss with you the plan best suited to your needs.

"Bob" Hamilton is in town.

The Lone Star Ranches, Limited have been incorporated at Jenner, with a capitalization of \$300,000.

The heavy winds on Monday are reported to have done damage to several buildings in Estuary.

Cons. Paxton, made a patrol trip into the Hilda district the latter part of last week.

Mr. and Mrs. L. Sheldon Porter, and children, and Mr. and Mrs. Wm. Stephenson, of Lead are were in town, Wednesday.

Messrs. Thow and Crosbie defeated Messrs. Stephenson and Porter, in 18 hole matches on the local golf course, Wednesday. Best scores for nine holes: Crosbie, 45; Porter, 44; MacDonald.

Mrs. K. Johnson, of Here Regis, Dorsetshire, England, arrived in town last Thursday, and will spend the summer months with her son Gerald and daughter-in-law, Mrs. J. Johnson—Enterprise, Leader.

F. Worth, of Abbey, Saskatchewan, was the guest of Mr. and Mrs. McDonald, over Monday night, returning to Abbey, on Tuesday. He used the trip home by car with F. Bradford, who had garaged his car in the bank, which was a few days previously. Mr. Worth reports that there is yet considerable seedling to be done in the Abbey district.

A trip into the country south of the Saskatchewan river, out through Hilda and Eva districts shows crop conditions to be most promising. Sloughs are to be found on almost every farm, sometimes to the extent of two or three in number. In many places they span the road and a diversion has to be made into a neighbouring field to get around them. A large amount of the grain is now up three and four inches, is thick in growth and of good color.

A visit to the Beatty ranch showed stock there to be getting into good condition. Some

good types of fairly heavy Clyde horses were being broken in.

Mr. and Mrs. J. Humphries and family, made a trip to Benton, Alta., the first of the week.

W. C. Boyd, made a round trip, on Saturday, by automobile to Acadia Valley, Co. ed. Oyen and Buffalo. He reports that he found seeding to be well advanced, and throughout his experience has never seen the crops looking better. The country is well sprinkled with sloughs. Mrs. H. F. Boyd, his mother accompanied him to Co. ed. and is visiting there for a period. At Marquette, Saskatchewan it is said has not yet commenced, the ground being too wet.

A number of changes in the color of Canadian postage stamps are being made to conform with the new international regulations. A straw-colored one-cent stamp is being issued to replace the old green one-cent stamp which has been in use many years; and as the various post offices exhaust their supply of green stamps they will be replaced with the new issue. The red two-cent stamp is being replaced with a green stamp, and should a six

cent stamp ever be issued it will take the red color hitherto distinguishing the two-cent stamp. The five-cent stamp is of a violet shade, while the 10-cent stamp is blue.

Cattle Roundups

Attention is called to the fact that requests for roundups of cattle, before being granted by the minister of agriculture, must be signed by at least ten persons who shall be responsible for the conduct of the roundup in accordance with regulations.

Don't Lose Your Head

YOU CAN GET 150 MORE FOR A BUSHEL OF WHEAT

That Is What You Can Do Provided You Take Advantage of Our Offer

We have made arrangements with the E. H. Heath Co. Limited, who publish the CANADIAN POWER FARMER whereby we are able to offer that farm magazine together with our own weekly at the one price for both papers.

The CANADIAN POWER FARMER is Western Canada's biggest farm monthly. It is now in its twentieth year which means that it is thoroughly established throughout the West. It deals with the mechanical side of the farm. Every issue is full of helpful hints and experiences on the operation of all kinds of farm machinery from a washing machine to a tractor. Its editor has just completed a trip of several months over Western Canada of the farmers. He visited the farmers, lived with them and worked with them. The results of his trip will appear during the next twelve months.

This offer may be withdrawn at any time. Without doubt your intention is to renew for this weekly, then why not take a year's subscription to this weekly together with advantage now. Your subscription to this weekly together with a year's subscription to THE CANADIAN POWER FARMER for the same price as this weekly alone. This is where you make \$1.50 on a bushel of wheat.

Mail your cheque or drop into our office the first time you are in town.
